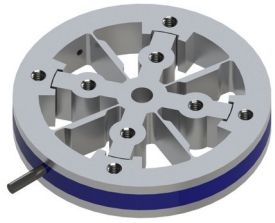
Torque sensor TD70 25mNm

Item number: 3133



Highlights

- By using distance pieces the torque sensor is also isolated thermically from the traction unit
- Through the integrated mechanical stopper overload is prevented.

The torque sensor consists of an outer flange and an inner flange which are connected by 4 s-shaped spiral springs. Outer and inner flange have 4 threads M4 each for torque introduction.
The sensor is suitable for measurement of reaction moment e.g. in the clock industry, in wind tunnel weighersor for measurement of frictional forces.
Through the integrated mechanical stopper overload is prevented.
It is recommended to insert distance pieces as shown in the assembly drawing. These can be shock absorbers with M4 threads.
By using distance pieces the torque sensor is also isolated thermically from the traction unit.
