6-Axis Force Sensor K6D110 1kN/100Nm/MP11

Item number: 9723

The multi-component sensor K6D110 allows force and torque measurement in three mutually perpendicular axes.
The multi-component sensor K6D110 is characterized by a big measuring range for torques at the same time with the small outer diameter.
With this multi-component sensor of the „second generation“ is used rod construction, which absorbs forces and torques directly on the pitch circle of the fastening thread.
The force transmission is applied on the 1 mm raised segments. The inner diameter of segments is used for the centering. Due to segmented, ring-shaped front surface, the optimal force transmission and therefore the best possible reproducibility in the range of about 0,1 % will be obtained.

The multi-component force sensor is very well suited for use in robotics, e.g.

- For collision detection
- "Teach-In"
- Collision detection
- Force or torque-controlled operation
- Load measurement in medicine, prosthetics, orthopaedic engineering
- Measurement in sports medicine
- Comfort / ergonomics measurements

The force and torque loadings are evaluated e.g. using a GSV-8AS measurement amplifier or an integrated electronic of type GSV-6.
The sensor K6D110 4kN/250Nm is made of aluminium alloy, the sensor K6D110 10kN/750Nm is made of high-strength stainless steel 1.4542.

Technical Data

Basic Data		Unit
Type	6-axis force sensor	
Force direction	Tension/Compression	
Rated force Fx	1	kN
Rated force Fy	1	kN
Rated force Fz	2.5	kN
Force introduction	Internal thread	
Dimension 1	6x M10x1,5	
Sensor Fastening	Internal thread	
Dimension 2	6x M10x1,5	
Operating force	300	% FS
Material	alluminum-alloy	
Natural frequency fx	1587.1	Hz
Height	60	mm
Length or Diameter	110	mm
Rated torque Mx	100	Nm
Rated torque My	100	Nm
Rated torque Mz	100	Nm
Torque limit	300	% FS
Bending moment limit	300	% FS

Abbreviation : RD: „Reading"; FS: „Full Scale";The application of a calibration matrix is required for the determination of the forces Fx, Fy, Fz and moments Mx, My, and Mz from the 6 measurement channels, and to compensate for the crosstalk.
The calibration data are individually determined and documented for the sensor.
The measurement error is expressed individually by the specification of the extended measurement uncertainty (k = 2) for the forces Fx, Fy, Fz, and moments Mx, My, Mz.

Mounting

The forces is applied to an annulus (Ø100-Ø65) on the end faces of the sensor. No force is applied to the area inside the ring.

A centring hole is provided to secure the angular position.

- The elements with the unit kN/mm describe the relationship between force and path.
- The elements with the unit kNm describe the relationship between torque and twist.
- The elements with the unit kN describe the relationship between torque and path (columns 1 to 3) or the relationship between force and twist (columns 4 to 6)
