

6-Axis Force Sensor K6D80ri 1kN/100Nm

Item number: 16682

The multi-component sensor K6D80ri allows force and torque measurement in three mutually perpendicular axes.

The multi-component sensor K6D80ri distinguishes itself by a big measuring range for torques at the same time with the small outer diameter. With this multi-component sensor of the „second generation“ is used rod construction, which absorbs forces and torques directly on the pitch circle of the fastening thread. Thereby, the maximum stiffness and the biggest measuring range will be achieved for the torques. The force transmission is applied on the 1 mm raised segments. The inner diameter of segments is used for the centering. Due to segmented, ring-shaped front surface, the optimal force transmission and therefore the best possible reproducibility in the range of about 0,1 % will be obtained.

The multi-component force sensor is very well suited for use in robotics, e.g.

- For collision detection
- „Teach-In“
- Presence detection and error detection
- Force or torque-controlled operation
- Load measurement in medicine, prosthetics, orthopaedic engineering or gait analysis
- Measurement in sports medicine
- Comfort / ergonomics measurements

The force and torque loadings are evaluated using an integrated electronic of type GSV-61i. The sensor K6D80ri 1kN/100Nm is made of aluminium alloy.

By applying a compensation matrix, crosstalk across all axes can typically be reduced to below 1%, with the compensation itself (mechanical and electrical) already reducing crosstalk to typically less than 4% of the nominal load. The crosstalk is reproducible and proportional to the applied force amplitude.

Optional special version

- Protection class IP68: from rated force 200 N
- Temperature range -40°C to 180°C
- Vacuum version from 10^{-5} mbar
- Pressure range up to 8 bar

Technical Drawing

Technical Data

Basic Data		Unit
Type	6-axis force sensor	
Force direction	Tension/Compression	
Rated force Fx	1	kN
Rated force Fy	1	kN
Rated force Fz	2.5	kN
Force introduction	Internal thread	
Dimension 1	4x M6x9	
Sensor Fastening	Internal thread	
Dimension 2	4x M6x20	
Operating force	300	%FS
Rated displacement	0.05	mm
Twist	0.04	rad
Material	aluminum-alloy	
Natural frequency fx	2.4	kHz
Height	60	mm
Length or Diameter	80	mm
Rated torque Mx	100	Nm
Rated torque My	100	Nm
Rated torque Mz	100	Nm
Torque limit	300	% FS
Bending moment limit	300	% FS
Breaking force	600	%

Electrical Data		Unit
Input resistance	350	Ohm
Tolerance input resistance	10	Ohm
Output resistance	350	Ohm
Tolerance output resistance	10	Ohm
Insulation resistance	2	GOhm
Rated range of excitation voltage from	2.5	V
Rated range of excitation voltage to	5	V
Operating range of excitation voltage from	1	V
Operating range of excitation voltage to	5	V
Zero signal from	-0.05	mV/V
Zero signal to	0.05	mV/V
Characteristic value range from	0.5	mV/V
Characteristic value range to	0.8	mV/V

Eccentricity and Crosstalk		Unit
Crosstalk	1	%FS

Accuracy Data		Unit
Accuracy class	0,2	
Relative linearity error	0.1	%FS
Relative zero signal hysteresis	0.1	%FS
Temperature effect on zero signal	0.1	%FS/K
Temperature effect on characteristic value	0.05	%RD/K
Relative creep	0.1	%FS
Relative repeatability error	0.2	%FS

Environmental Data		Unit
Rated temperature range from	-10	°C
Rated temperature range to	50	°C
Operating temperature range from	-10	°C
Operating temperature range to	65	°C
Storage temperature range from	-10	°C
Storage temperature range to	65	°C
Environmental protection	IP65	

Abbreviation : RD: „Reading“; FS: „Full Scale“; The application of a calibration matrix is required for the determination of the forces Fx, Fy, Fz and moments Mx, My, and Mz from the 6 measurement channels, and to compensate for the crosstalk.

The calibration data are individually determined and documented for the sensor.

The measurement error is expressed individually by the specification of the extended measurement uncertainty (k = 2) for the forces Fx, Fy, Fz, and moments Mx, My, Mz.

PIN Assignment

Channel	Symbol	Designation	Color	PIN
1	+Us	positive bridge supply	yellow	14
	-Us	negative bridge supply	green	13
	+Ud	positive bridge output	white	1
	-Ud	negative bridge output	brown	5
2	+Us	positive bridge supply	gray	15
	-Us	negative bridge supply	black	16
	+Ud	positive bridge output	red	7
	-Ud	negative bridge output	pink	6
3	+Us	positive bridge supply	brown-blue	23
	-Us	negative bridge supply	white-red	24
	+Ud	positive bridge output	brown-red	12
	-Ud	negative bridge output	white-pink	4
4	+Us	positive bridge supply	white-yellow	19
	-Us	negative bridge supply	yellow-brown	20
	+Ud	positive bridge output	brown-green	9
	-Ud	negative bridge output	white-green	3
5	+Us	positive bridge supply	white-gray	21
	-Us	negative bridge supply	white-blue	22
	+Ud	positive bridge output	gray-brown	10
	-Ud	negative bridge output	pink-brown	11
6	+Us	positive bridge supply	gray-pink	18
	-Us	negative bridge supply	purple	17
	+Ud	positive bridge output	red-blue	8
	-Ud	negative bridge output	blue	2
-	shield		transparent	

Shield: connected with sensor housing;

Mounting

The forces is applied to an annulus (Ø75-Ø45) on the end faces of the sensor. No force is applied to the area inside the ring.

A centring hole is provided to secure the angular position.

Stiffness Matrix

25.2 kN/mm	0.0	0.0	0.0	629.3 kN	0.0
0.0	25.2 kN/mm	0.0	-629.3 kN	0.0	0.0
0.0	0.0	136.9 kN/mm	0.0	0.0	0.0
0.0	-629.3 kN	0.0	63.6 kNm	0.0	0.0
629.3 kN	0.0	0.0	0.0	63.6 kNm	0.0
0.0	0.0	0.0	0.0	0.0	35.2 kNm

- The elements with the unit kN/mm describe the relationship between force and path.
- The elements with the unit kNm describe the relationship between torque and twist.
- The elements with the unit kN describe the relationship between torque and path (columns 1 to 3) or the relationship between force and twist (columns 4 to 6)
