

GSV-1L

Highlights

- Tare function via control cable
- 250 Hz Filter in the standard version
- 2,5 kHz or 10kHz Filter optionally
- ± 5 or ± 10 V output

Description

The PCB GSV-1L measures only 30mm x 40.5mm x 6.5mm and can be easily integrated as an add-on on larger PCB boards (Pin headers are integrated).

The high limiting frequency of 250 Hz is suitable for the detection of static and dynamic signals from sensors with strain gauges.

The automatic automatic zero adjustment store settings permanently in the nonvolatile memory also by voltage interruption.
