

## GSV-1A

### Description

The measuring amplifier GSV-1A is ideal for assembly near the sensor, because the aluminum housing (protection class: IP66) is very compact.

The high limiting frequency of 2.5 kHz is suitable for the detection of static and dynamic signals from sensors with strain gauges.

The automatic zero adjustment store settings permanently in the nonvolatile memory also by voltage interruption.

## Mounting

## Pin configuration

The GSV-1A measurement amplifier can also optionally be delivered with type 763 plug connectors.

Terminal		Series 763 (M12) socket		Series 763 (M12) pins	
1	-U <sub>D</sub> Negative differential input	4	black		
2	+U <sub>D</sub> Positive differential input	3	blue		
3	+U <sub>S</sub> : Positive bridge excitation (5V)	1	brown		
4	-U <sub>S</sub> : Negative bridge excitation (GND)	2	white		
5	GND: Ground			3+5	blue+grey
6	+U <sub>A</sub> : Analogue output			2	white
7	+U <sub>B</sub> Voltage supply (12V or 24V)			1	brown
8	T: Control input zero adjustment			4	black

## Adjustment of the input range

The input sensitivity can be adjusted by moving the jumper. The input sensitivity for position 1 is indicated in the type designation. In position 5, the amplification can be set in a continuously variable manner using the "TR" trimmer.

Position	Amplification Factor	Input Range
1	1	2 mV/V
2	2	1 mV/V
3	4	0.5 mV/V
4	10	0.2 mV/V
5	1...10	0.2 ... 2 mV/V

For an amplification factor 1, the complete output signal is reached at a modulation of 100%.

For an amplification factor of 2, the complete output signal is already reached at a modulation of 50%.

Various versions are available, e.g. with voltage output +5V, with voltage output +10V, with current output 4...20mA, and with various input sensitivities +2mV/V and +3.5mV/V.
