

GSM-Interface G3151

Description

The device server "OnCell G3151" connects devices with serial interface via mobile radio to a PC.

The device server has a LAN interface as well as a quad-band GSM / GPRS gateway 850/900/1800/1900 MHz.

It is suitable for connections via GPRS, UMTS or LTE.

Via the LAN interface, it is also possible to operate within the company's own network via LAN, as with the device server Nport 5110A.

With the "Reverse Real Com Mode", Moxa provides a solution for establishing a serial connection to a device server with a provisional IP address in the mobile network.
