### Description

The 3-axis force sensor K3D120 is suitable for measuring force in three mutually perpendicular axes.

It is ready for 50N to 5kN in all three axes and can optionally be manufactured in other measurement ranges.

The force sensor is made of high-strength aluminium alloy up to the 1kN measurement range. From 1kN onwards, the force sensor is made from the material stainless steel 1.4542 (option "VA").

It stands out due to its particularly compact structure, with an area of 120mm x 120mm and a low total height of just 30mm.

Example application areas include force measurement in production processes, force control in handling machines, force measurement in assembly processes, and three-dimensional load measurement.
